SKILLS

Core: TypeScript, JavaScript, React, Next.js

Frontend: Tailwind CSS, Redux, Zustand, responsive UI, accessibility, performance

Backend: Node.js, Express.js, NestJS, Supabase

Databases: PostgreSQL, MongoDB

Data & ORM: Prisma, Drizzle ORM, TypeORM, Mongoose

Payments: Stripe

Storage: AWS S3, Cloudflare R2 object storage

Tools: Git, Docker, Vercel

LANGUAGES

- English - Fluent
- Romanian - Native

EDUCATION

Master in Computer Science and Engineering

FIESC | Stefan cel Mare University of Suceava

2024 - Present

Degree in Computer Science and Information Technology

FIESC | Stefan cel Mare University of Suceava

2018 - 2022

PROJECT LINKS

- **Ajandekbar.hu** - gift card e-commerce platform
- **Saptarii.ro** - community subscription platform

PROFILE

Software Developer with 4+ years of experience building business, e-commerce, ERP, CRM and community platforms. Strongest in React, Next.js, TypeScript and frontend architecture, with practical full-stack experience using Node.js/Express, Supabase/PostgreSQL, MongoDB and Stripe. I focus on ownership, clean delivery and turning complex business workflows into usable, maintainable applications.

WORK EXPERIENCE

TRAVLRD - Software Developer 2025 - PRESENT

- **Ajandekbar.hu:** Led development of a gift card e-commerce platform with admin and partner portals, working full-stack across Stripe payments, product flows, customer flows, API work and database logic.
- **Internal estimation tool:** Built an AI-assisted project estimation tool from early prototype to usable product, covering chat flows, AI function calls, project breakdowns and cost and time estimates, while developing a practical workflow with Codex and Claude Code for planning, research and targeted feature implementation.
- **Community platform:** Leading development of a platform for Hungarians living outside Hungary, covering posts, chat, business profiles, ads, maps and Cloudflare R2 object storage while coordinating work with other developers and using AI skills and sub-agents for task planning and targeted implementation support.

RaisisSoftware - Software Developer 2022 - 2025

- **ERP:** Led frontend development for nearly three years on a multi-tenant ERP used by multiple client organizations, covering offers, contracts, project planning, invoicing, reporting, permissions, tenant theming, document generation, PDF and table exports and Gantt views. Also built reusable UI patterns, tenant-level customization and Express.js backend support for document generation and export workflows.
- **CRM:** Worked through the full project lifecycle of a dealership CRM used by 100+ staff, building vehicle and client management, offer flows, role-based workflows, objectives and client reassignment logic.
- **FSM:** Contributed to Field Service Management features and cross-product decisions focused on workflow reliability.

CLIENT PROJECT

Saptarii.ro - Community subscription platform

- Built key parts of a client platform for a Red Dead Redemption 2 community: public site, subscriptions, Stripe payments, backend payment logic and AWS S3 object storage.
- Implemented an interactive multi-zoom map with custom tile loading and developed a significant part of the admin dashboard.
